

A shredder for the eco-office building

Elcoman, a leading shredder maker, is at the cutting edge of the eco-friendly market with the highly innovative features of its KOBRA range.

Elcoman has been for years a forerunner in environmentally friendly technology with its exclusive "Energy Smart" patented system. Available exclusively on the KOBRA range, Energy Smart saves energy and protects the environment by reducing carbon emissions.

Fabio Colombo, managing director of Elcoman Italy, explains that a KOBRA shredder requires electrical energy only during use. Once the shredding operation is completed, the system management software will automatically activate the stand-by power consumption Energy

Smart mode, making sure that no more electrical energy is drained from the power source. No need to press any switch: the machine turns automatically into the Energy Smart mode if not used and automatically re-activates simply by inserting paper. At first glance, stand-by power consumption may be considered

insignificant, however, compared to most of the traditional shredders on the market, KOBRA shredders can save up to €20 (depending on cost of energy) a year of electrical energy and will reduce, by 65kg, the CO₂ that would have been introduced into the atmosphere for generation of the power saved by Energy Smart.
