

ENERGY SMART
ENERGY SMART

"Energy Smart" is the latest technological development by Elcoman.

Available exclusively on the KOBRA range of shredders, "Energy Smart" saves energy and protects the environment by reducing emissions responsible for the Global Warming.

The energy consumption of the paper shredder is managed by a dedicated software which operates in conjunction with illuminated optical indicators located on top of the machine. A KOBRA shredder requires electrical energy only during use. Once shredding operation is completed, the system management software will automatically activate the stand-by zero consumption (Energy Smart) mode making sure that no more electrical energy is drained from the power source.

At first glance, stand-by power consumption may be considered insignificant. However, every KOBRA shredder equipped with the "Energy Smart" system, compared to most of the traditional shredders on the market, can save up to Euro 20,00 a year* of electrical energy and will reduce, by 65 Kgs, the carbon dioxide (CO2) that would have been introduced into the atmosphere for generation of the power saved by Energy Smart.
